

CSE - 2017 → Paper II

5/10) write the Boolean expression $Z(Y+Z)(X+Y+Z)$

in its simplest form using Boolean postulate rules. Mention the rules used during simplification. Verify your result by constructing the truth table for the given expression and for its simplest form

$$\Rightarrow \text{Let } A = Z(Y+Z)(X+Y+Z) \\ = (ZY + Z^2)(X+Y+Z)$$

$$= (\bar{x}y + z)(x + y + z) \quad [\because A^2 = A]$$

$$= \bar{x}yx + \bar{x}y^2 + \bar{x}^2y + \bar{x}x + \bar{x}y + \bar{x}z^2$$

$$= \bar{x}yx + \bar{x}y + \bar{x}y + \bar{x}x + \bar{x}y + \bar{x}z$$

$$= \bar{x}y(x+1) + \bar{x}y + \bar{x}x + \bar{x}(y+1)$$

$$= \bar{x}y + \bar{x}y + \bar{x}x + \bar{x} \quad [\because 1+A=1]$$

$$= \bar{x}y + \bar{x}x + \bar{x}$$

$$= \bar{x}y + \bar{x}(x+1)$$

$$= \bar{x}y + \bar{x}$$

$$= \bar{x}(y+1) = \bar{x}$$

$$\therefore A = \bar{x}$$

x	y	z	$\bar{x}(y+z)$	$(x+y+z)$	$\bar{x}(y+z)(x+y+z)$	z
0	0	0	0	0	0	0
0	0	1	1	1	1	1
0	1	0	0	1	0	0
0	1	1	1	1	1	1
1	0	0	0	1	0	0
1	0	1	1	1	1	1
1	1	0	0	1	0	0
1	1	1	1	1	1	1

$$\text{So, } \bar{x}(y+z)(x+y+z) = \bar{x} \quad [\text{proved}]$$

8) (b) write an algorithm in the form of a flow chart for Newton-Raphson method. Describe the cases of failure of this method.

\Rightarrow using Newton-Raphson method to $f(x)=0$, we have the iteration formula as,

$$x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)}$$

□ The Newton-Raphson Method fails when, $f'(x)=0$ or very small in the neighbourhood of the root.

Flow chart \Rightarrow

Start

Define function $f(x)$

Define function $f'(x)$

Read x_0, ϵ

Compute, $x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$
and $t = x_1 - x_0$

is
 $|t| > \epsilon$

Yes

No

print x_1

Stop

$x_0 = x_1$
